

ATREO CARRIER REPAIR PROGRAM

Atreo Services provides customers with the added value of a carrier repair program. Over time, pneumatic tube system carriers require maintenance to assure optimal performance. When you consider the time it takes staff to replace broken or worn-out carrier components, Atreo's repair program can have a big impact on your team's time management. **And time is money!**

Atreo stands behind its carriers with an inspection and repair program unique to the industry. Our program includes replacement of worn-out slide bands, broken latches and damaged hinge pins. We provide an end-to-end carrier inspection to identify unforeseen problems.

Saving you time, money and improving your performance

- + **Replace slide (wear) bands:** Atreo will install new slide bands to ensure proper fit and to provide softer carrier landing.
- + **Replace latches:** Atreo will install new latches to ensure proper closing and opening of carriers.
- + **Hinge pin:** Atreo will inspect and replace hinge pins as required to ensure carrier integrity and long-life performance.
- + **Complete Inspection:** Atreo will fully inspect your carrier for body cracks or chips, and notify you regarding the need for replacement.
