

## PNEUMATIC TUBE SYSTEM ACCESSORIES

### BIN LINER FOR 4-INCH AND 6-INCH STATIONS

Noise is a common challenge for hospitals. Atreo recognizes that pneumatic tube systems can be one source, particularly at the receiving station. To minimize this noise and to promote softer delivery of payloads, Atreo introduces the station bin liner for most common 4-inch and 6-inch hospital pneumatic tube systems.

Bin liner is quickly and easily installed in standard stations

Atreo's station bin liner features impact-absorbing walls and a coated surface that assures quick and easy cleanup of spills, while reducing noise and minimizing impact. Atreo's station bin liner can be easily removed for cleaning and disinfecting with common bleach and water.

With every station bin liner purchase, Atreo Services will donate a portion of proceeds from sales to Susan G. Komen® for breast cancer research.

*"As tube system users, we became accustomed to the noise of carriers slamming into the stations upon arrival. The Atreo station bin liner reduced noise levels significantly and our team really noticed the difference," -*

Alan Green, Plant Operations Supervisor,  
DeKalb Medical, Decatur, Ga.

#### Features and Benefits:

- + Easily installed and removed for cleaning and disinfecting
- + Reduces carrier noise upon arrival
- + Softens carrier impact
- + Attractively priced with additional quantity discounts
- + Fits most common brand-named 4-inch and 6-inch stations
